1 Part A: CSS Selector Data?

I extracted table used for comparing different depreciation methods from wikipedia. Actually I am doing some research about accounting estimate change which is relevant to the deprecia- tion method. The information extracted provide me a clear picture about the difference among different depreciation methods. I used youtube to learn how to use SelecctorGadget.

2 Part B: API

I used API method to extract daily stock prices for apple company. I find the stock prices for Apple is fluctuating over time but surrounding at 170 dollars. I used Rstudio to do the API using httr, jsonlite and dplyr packages. API is a new approach for me to obtain financial data.
